Pursuant to 37 C.F.R. 1.109 and M.P.E.P 1302.14, the following is an Examiner's Statement of Reasons for Allowance:

The prior arts of record do not teach the Internet content delivery acceleration system comprising a central proxy server, local proxy servers and a priority determination module. The central proxy server selects and transmits popular digital objects to local proxy servers over a communication medium. The local proxy servers concurrently receive the selected digital objects from the central proxy server and providing the selected digital objects to a caching database in local communication with the local proxy server in order to make the selected digital objects available to a plurality of user stations communicating with the cache database. The priority determination module uses both local priority data and global priority data in making a localized priority determination regarding digital objects stored in the caching database. Moreover, the prior arts of record do not teach a method of operating redundant proxy servers, which are similarly configured and provide with a token. Select one of the redundant proxy servers as a master and the other as a back up. Establish a failure with the master by the back up in response to: incrementing the token within the back up, transmitting the backup's token to a client station; and the backup assuming operation as the master.

The examiner considers the applicants' claims 1-28 to be allowable based on the claim interpretation and the aforesaid prior arts of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
